

YAKSHRAJ DALWADI

San José, CA | (302) 612-3867 | yakshdalwadi1002@gmail.com | linkedin.com/in/yakshraj-dalwadi-85a940248 | github.com/yaksh1010 | yaksh1010.github.io

EDUCATION

San José State University, San José, CA

Master of Science, Computer Science

Aug 2026 - Jul 2028

San José, CA

Navrachana University, Vadodara, India

Bachelor of Science, Computer Science

May 2025

Vadodara, India

• **GPA:** 3.56 / 4.0

Skills

Languages: Python, Java, Dart, Swift, JavaScript (Node.js), SQL, C++, Scala

Backend & Data: REST API Design, Dio, Firebase (Firestore, Realtime Database, Auth, Cloud Messaging), MongoDB, TensorFlow, OpenCV, Generative AI, Large Language Models, Scikit-learn, Apache Spark

Frameworks & Tools: Flutter, Unity, Git, GitHub, Android Studio, Xcode, Figma, Stripe, Razorpay

Practices: Agile, CI/CD, Unit Testing, Code Review, Debugging & Profiling, Clean Architecture, Repository Pattern, Dependency Injection, Localization, State Management (GetX, Riverpod, Provider, BLoC)

Concepts: Data Science, Data Modeling, Data Structures

EXPERIENCE

The Karmic Universe

Flutter Developer

Jan 2026 - Jun 2026

Remote

- Built and shipped a production cross-platform matchmaking application, Devotee Matrimony, on Google Play and the Apple App Store, reaching 10,000+ downloads and a 4-star rating across 231 reviews.
- Implemented OTP authentication with Dio, multi-criteria profile search, real-time in-app messaging, and granular privacy controls using Flutter's widget framework, reducing login friction and increasing active user sessions.
- Developed a personalized match-recommendation feed and saved-profiles system using Riverpod for state management and Dio for data fetching, boosting user engagement by encouraging repeat visits to prospective matches.

WeblogySphere Pvt. Ltd.

Mobile Application Developer

Dec 2024 - Dec 2025

Vadodara, India

- Built and shipped two production applications, Scan2Send and WorkHive Bidding, from requirements through release, leading a four-person team on Scan2Send.
- Integrated authentication, cloud storage, and background synchronization services, applying data modeling principles to keep information consistent in real time across devices.
- Reduced the application crash rate by roughly 40% by using debugging and profiling techniques to identify performance bottlenecks and refactor state management.

Self-Employed

Freelance Mobile Developer

Jul 2023 - Jul 2026

Vadodara, India (Remote)

- Designed, built, and published 10 client applications on Google Play and the App Store across transportation, food service, education, wellness, and media.
- Delivered GreenGains, a food-ordering app with real-time menus and payments, and StuTrack, a study tracker with timers, streaks, and progress analytics.
- Owned each engagement from requirements gathering through UI implementation, backend integration, production release, and post-launch maintenance, applying localization, repository-pattern design, and version-control best practices, which ensured on-time delivery and sustained app performance

PROJECTS

Devotee Matrimonial Platform [Devotee Matrimonial Platform](#)

- Architected the client with Clean Architecture, Riverpod state management, and the Repository pattern over a Dio-based API layer.
- Built paginated match browsing, profile management, subscription billing, and push notification delivery against RESTful endpoints.
- Cut duplication across screens with a shared widget library and centralized API services, shortening delivery time for new features.

StuTrack - AI Study Tracker & Focus App [StuTrack - AI Study Tracker & Focus App](#)

- Built and shipped a student productivity app to Google Play with 5,000+ downloads and a 4.5-star rating, spanning focus tracking, planning, distraction blocking, and social study features.
- Implemented an on-device app blocker using the Android Accessibility Service and a platform channel, detecting foreground app launches and gating restricted apps during active focus sessions.
- Integrated a generative AI study planner powered by an LLM that converts student goals, syllabus progress, and past session history into daily plans, with prompt construction and response parsing handled server-side.
- Built live study rooms and a global leaderboard with Firestore real-time listeners, along with streaks, syllabus tracking, and daily, weekly, and monthly data analytics generated from aggregated session data.

Doo Deg Taxi - Ride-Hailing Platform [Doo Deg Taxi - Ride-Hailing Platform](#)

- Built a full-stack ride-hailing application using Clean Architecture, Riverpod, and the Repository pattern; published on Google Play and the App Store with 1,000+ downloads.
- Implemented real-time ride booking, live driver tracking with Google Maps, fare estimation, trip management, in-app payments, and driver onboarding over RESTful APIs.
- Structured the networking layer with centralized API services and dependency injection to keep trip state consistent across rider and driver flows.

Certifications

- Cloud Foundations: AWS
- Cloud Security Foundations: AWS
- Machine Learning: AWS
- Natural Language Processing: AWS
