EDUCATION

San José State University, San José, CA
Master of Science in Computer Science
Navrachana University, Vadodara, India
Bachelor of Science in Computer Science

Aug 2026 – Jul 2028
Expected July 2028
May 2025
GPA: 3.56 / 4.0

TECHNICAL SKILLS

Languages: Python, Java, Dart, Swift, JavaScript (Node.js), SQL
Backend & Data: REST API Design, Dio, Firebase (Firestore, Realtime Database, Auth, Cloud Messaging), MongoDB, TensorFlow, OpenCV
Frameworks & Tools: Flutter, Unity, Git, GitHub, Android Studio, Xcode, Figma, Stripe, Razorpay
Practices: Agile, CI/CD, Unit Testing, Code Review, Debugging & Profiling, Clean Architecture, Repository Pattern, Dependency Injection, Localization, State Management (GetX, Riverpod, Provider, BLoC)

EXPERIENCE

Flutter Developer — The Karmic Universe

Jan 2026 – Jun 2026

Remote • Full-time

- Built and shipped Devotee Matrimony, a cross-platform matchmaking application on Google Play and the Apple App Store, now at 10,000+ downloads and a 4-star rating across 231 reviews.
- Implemented OTP authentication, multi-criteria profile search, real-time in-app messaging, and granular privacy controls for user-managed profile visibility.
- Developed a personalized match recommendation feed and a saved-profiles system to help users track and revisit prospective matches.

Mobile Application Developer — WeblogySphere Pvt. Ltd.

Dec 2024 – Dec 2025

Vadodara, India • Promoted from Flutter Development Intern to full-time developer

- Built and shipped two production applications, Scan2Send and WorkHive Bidding, from requirements through release; led a four-person team on Scan2Send.
- Integrated authentication, cloud storage, and background sync services to keep data consistent in real time across devices.
- Cut the application crash rate by roughly 40% by profiling performance bottlenecks and refactoring state management.

Freelance Mobile Developer — Self-Employed

Jul 2023 – Jul 2026

Vadodara, India (Remote)

- Designed, built, and published 10 client applications on Google Play and the App Store across transportation, food service, education, wellness, and media.
- Delivered GreenGains, a food-ordering app with real-time menus and payments, and StuTrack, a study tracker with timers, streaks, and progress analytics.
- Owned each engagement end to end: requirements gathering, UI implementation, backend integration, production release, and post-launch maintenance.

PROJECTS

Devotee Matrimonial Platform — Flutter, Riverpod, Dio, REST APIs, Firebase

- Built and shipped Devotee Matrimony, a cross-platform matchmaking application on Google Play and the Apple App Store, now at 10,000+ downloads and a 4-star rating across 231 reviews.
- Architected the client with Clean Architecture, Riverpod state management, and the Repository pattern over a Dio-based API layer.
- Built paginated match browsing, profile management, subscription billing, and push notification delivery against RESTful endpoints.
- Cut duplication across screens with a shared widget library and centralized API services, shortening delivery time for new features.

StuTrack — AI Study Tracker & Focus App — Flutter, Dart, Kotlin, Firebase, REST APIs, LLM API

- Built and shipped a student productivity app to Google Play with 5,000+ downloads and a 4.5-star rating, spanning focus tracking, planning, distraction blocking, and social study features.
- Implemented an app blocker over the Android Accessibility Service through a platform channel, detecting foreground app launches and gating restricted apps during active sessions with all monitoring handled on-device.
- Integrated an LLM-backed study planner that turns a student's goals, syllabus progress, and past session history into daily plans, with prompt construction and response parsing handled server-side.
- Built live study rooms and a global leaderboard on Firestore real-time listeners, plus streaks, syllabus tracking, and daily/weekly/monthly analytics rendered from aggregated session data.

Doo Deg Taxi — Ride-Hailing Platform — Flutter, Riverpod, Dio, REST APIs, Firebase, Google Maps

- Built a full-stack ride-hailing application using Clean Architecture, Riverpod, and the Repository pattern; published on Google Play and the App Store with 1,000+ downloads.
- Implemented real-time ride booking, live driver tracking with Google Maps, fare estimation, trip management, in-app payments, and driver onboarding over RESTful APIs.
- Structured the networking layer with centralized API services and dependency injection to keep trip state consistent across rider and driver flows.

CERTIFICATIONS

- AWS — Cloud Foundations; Cloud Security Foundations; Machine Learning; Natural Language Processing
